Safety & Prevention Through Early Intervention

An Innovative Solution to Help Prevent Drug Misuse, Overdose, Intentional Injury and Pediatric Poisonings in Your Community

safe-rx.com | (833) 288-SAFE

Opioids & Other Medications Continue to be a Public Health Challenge in America.

Controlled substance prescription medications such as Opioids and ADHD medications are tightly controlled until the moment they are dispensed from a pharmacy. They then become an easy target for diversion and misuse. Outdated child resistant caps contribute to the problem nationwide, leading to pediatric poisonings and to unauthorized access to medication.

By making sure we store medications safely, we can improve the health and safety of our communities. We can empower parents, families and caregivers to ensure medications are safe in their home, school, or when traveling, and to protect our communities as a whole.

Safe Rx Locking Pill Bottles (LPBs®) Pharmacies lock up these medications – we should too!

Safe Rx Locking Pill Bottles are a simple, affordable, discrete, transportable and practical tool that can be used as a solution to secure medications. The caps contain a 4-digit combination lock to ensure medications are locked after they leave the pharmacy. They have been independently tested to verify they are **Child Resistant**, **Teen Resistant** and **Senior Friendly**. LPBs are available in retail cartons with a pre-set 4-digit code and kits with an encoding device to customize the code.
